SUBJECT CODE: EI-27001
SUBJECT NOMENCLATURE: CIRCUIT ANALYSIS AND SYNTHESIS
Course Objectives:
1. To Identify and realizes various electrical circuit topologies.
2. Determine time domain and frequency domain responses.

Course Outcomes: - The student will able to:

CO1: Apply KVL and KCL in Electrical Circuits.

CO2: Identify circuit Topology to reduce complexity.

CO3: Apply Fourier series and Laplace transform for circuit analysis and synthesis.

CO4: Apply various network topologies to analyzes and synthesis of various electrical parameters (2-port/ Hybrid/ T/ π)

CO5: To perform time domain analysis of electrical networks.

CO- PO articulation matrix

Average PO	3	2	2.3	1								

Course Outcomes (Practical):

CO-1: KVL and KCL in electrical circuit (EXP -1)

CO-2: EXP (2 & 3) Thevenin's / Norton's Theorem.

CO-3: EXP (4,5 & 6) Superpostion Theorem , Reciprocity Theorem and maximum power transfer Theorem.

CO-4: EXP (7) design and implement integrator / differentiator and verify the functionality of circuits

CO-5: EXP (4,5 & 8,9,10) to obtain frequency response of series and parallel RLC circuit (with step input and sinusoidal input) & calculate its resonant frequency

SUBJECT CODE: EI- 27002
SUBJECT NOMENCLATURE: FUNDAMENTALS OF MEASUREMENT

Course Objective: Student will able to identify and classify various techniques and instruments for measurement and their calibrations strategies.

Course Outcomes: Student will able to:

CO1: To discuss fundamentals of measuring instruments theoretically as well as practically.

CO2: To determine Cathode ray oscilloscope in detail with its applications and probe compensation.

CO3: Attain basic knowledge about Analog instruments.

CO4: Description of measurement of low resistances, voltage, current, phase frequency etc.

CO5: To implement compensation, calibration and testing of measuring instruments.

CO6: Gain knowledge about A.C. bridges and its applications.

CO- PO articulation matrix

Course Outcomes (Practical): The student will able to:

CO1: To use Cathode ray oscilloscope and measure amplitude, phase (lissajous pattern) & frequency of unknown signal & compare with DSO.

CO2: Construct & operationalize Analog instruments based on PMMC principle.

CO3: Measure unknown resistance using different methodologies.

CO4: Measure unknown Inductance using Maxwell's, Inductance Bridge, Hay's Bridge, Anderson's Bridge, Owen's Bridge.

CO5: Measure unknown capacitance using De- Sauty's Bridge, and Schering's Bridge.

SUBJECTCODE: EI-27003
SUBJECT NOMENCLATURE: ELECTRONIC DEVICES AND CIRCUITS

Course objectives: The student will able to learn and understand the theory of semi-conductor devicesand its modeling & applications.

Course Outcomes: At end of course, the students should

CO1: Able to identify the semiconductor type and explain its working principle.

CO2: Able to discuss the working principle of diodes/BJT and their applications.

CO3: Able to develop the models of diodes & & BJT/FET/MOSFET.

CO4: Able to explain the principle of operation of MOSFET & its circuit design.

CO 5: To discuss fabrication techniques for integrated circuits.

Average PO	3	1.8	1	2								1

Course Outcomes (Practical): At end of lab session, the students should be able to:

CO1: To realize the functionality of CRO, function generator and measure parameters of different waveforms.

CO2: To determine VI characteristics for diodes (PN Junction, LED & Zener)

CO3: To apply and perform the Hall Effect on semiconductor to identify their types and concentrations.

CO4: To build, test & obtain the characteristics & parameters of BJT from its input /output variations.

CO5: To build the circuit and obtain characteristics of N Channel MOSFET.

SUBJECT CODE: MA-27014
SUBJECT NOMENCLATURE: MATHEMATICS-III

Course Outcomes:-
CO1: Learn advance calculus.
CO2: Understand Fourier series, partial differential equation and their applications in Engg.
CO3: Learn Laplace & Fourier transforms & their applications in Electronics circuit analysis, communication & control systems.
CO4: Learns calculus for finite differentiation and its applications.

SUBJECT NOMENCLATURE: ELECTRONIC WORKSHOP LAB

Course Objective: To identify about basic electronic component. To apply colour coding scheme for resistance (Band 4, Band 5 & band 6) To implement methodology for designing PCB (Etching, Drilling & Soldering)

Course Outcomes:

CO1: To identify about basic electronic component.

CO2: To gain knowledge of characteristics of basic electronic component.

CO2: To apply colour coding scheme for resistance (Band 4, Band 5 & band 6)

CO3: To implement methodology for designing PCB (Etching, Drilling & Soldering)

CO4: To design an electronics circuit using basic components like BJT/FET/timers, amplifiers & several IC's.

BE- II Year (4YDC) Semester (B)

SUBJECT CODE: EI- 27501
SUBJECT NOMENCLATURE: ANALOG ELECTRONICS

Course Objectives: Student should be able to analyze & design

1. BJT and FET based amplifier for required frequency specifications
2. Power efficient amplifiers
3. Amplifiers for various special mathematical operations using integrated circuits.

Course Outcomes: Student should be able to

CO1: To perform the frequency response & gain calculation of single/double stage amplifiers.
CO2: To apply the fundamentals of feedback amplifier & oscillators.
CO3: To analyze and apply OP-amp fundamentals and descriptive view of Op-amp IC's.
CO4: To classify & demonstrate frequency response of tuned RF voltage amplifiers.
CO5: To describe the role of Multi vibrators & linear wave shaping circuits.

CO- PO articulation matrix

CO 5	3	2	2	1								1
Average PO	3	1.6	1.4	1.333								1

Course Outcomes (Practical's): The student will able to design the circuit and analyze:

CO1: The frequency responses of different RC coupled amplifiers & calculate their parameters.
CO2: The frequency response of feedback amplifiers & oscillators.
CO3: Various multi-vibrators & observe their output waveform.
CO4: Operational Amplifiers (with calculation of parameters) & implementing/verifying of different applications of Op-amp.
CO5: Frequency response of Tuned amplifiers.

SUBJECT CODE: EI-27551
SUBJECT NOMENCLATURE: SENSORS& TRANSDUCERS

Course Objectives: The student will able to identify various sensors & transducers for particular applications.

Course Outcomes: - The student will able to:

CO1: To discuss role of Sensor and transducers in instrumentation
CO2: Descriptive view for the transducer construction, classification, principle of operation and characteristics.
CO3: Gain knowledge about transducers for measurement of displacement, strain, velocity, acceleration etc.
CO4: To analyze transducers for measurement of pressure and force.
CO5: To discuss about bimetallic and temperature measurement system.
CO6: To discuss about transducers for flow and level measurement.

CO- PO articulation matrix

Average PO	3	2.5	2	1	1	2						

Course Outcomes (Practical):- the student will able to perform and measure

CO1: Resistive type transducers.

CO2: Temperature using RTD/

Thermistor/Thermocouple.CO3: Linear range &

sensitivity of Strain Gauge.

CO4: behavior & characteristics of LVDT.

CO5: displacement using capacitive type transducers & their sensitivity.

SUBJECTCODEEI27562
SUBJECT NOMENCLATURE: DIGITAL ELECTRONICS

Course Objectives: The student will
1. Understand fundamentals of digital electronics.
2. Realize various digital circuits using gates.

Course Outcomes:

CO1: To understand reduction of logical expressions using Boolean algebra, k-map and tabulation method and implement the functions using logic gates.
CO2: To develop combinational circuits for given application and verify its operation.
CO3: To gain the knowledge of sequential circuits with their implementations.
CO4: To analyze memory classification and structure.
CO5: To implement asynchronous and synchronous circuits fall under digital electronics.
CO6: To design the basic digital circuits and to verify their operation.

CO6	3	2	2						1	1		
Average PO	3	2.5	2						1	1		

Course Outcomes (Practical): The student will able to build, test & realize

CO1: Truth tables of logic gates & implementation of Boolean logic equations.

CO2: Design combinational circuits for given application and verifies its operation.
(Adder/subtractor/convertors).

CO3: Design & verify sequential circuits for given application and verifies its operation.
(Mux/Demux/Encoder/Decoder/Flip-flops/counters)

SUBJECT CODE: MA-27563
SUBJECT NOMENCLATURE: MATHEMATICS-IV

Course Outcomes:-
CO1: Learn functioning of complex variables.
CO2: Understand statistics & probability & their applications.
CO3: Learn reliability & its applications in electronics system.
CO4: Understand graph theory & optimization.

SUBJECT CODE: EI-279992
SUBJECT NOMENCLATURE: SOFTWARE WORKSHOP LAB
Course Objective: The student will able to simulate the electronic circuits.

Course Outcomes: - The student will able to:
CO1: To implement the MATLAB Desktop, Command window and the Graph Window
CO2: Be able to do simple and complex calculation using MATLAB
CO3: Be able to carry out numerical computations and analyses
CO4: To apply the mathematical concepts upon which numerical methods.
CO5: Todiscuss the tools that are essential in solving engineering problems

SUBJECT CODE: EI-27881
SUBJECT NOMENCLATURE: VALUES, HUMANITIES & PROFESSIONAL ETHICS

Course Objective:
1. To make students understand of his/her social responsibility as an engineer.
2. To create an awareness on Engineering Ethics and Human Values
3. To make students capable of doing self-exploration and recapitulation
4. To make students aware of the global problems

Course Outcomes: - After completion of course, the students will be able to:

1. Explain and elaborate the social institutions through which the society and nation is governed.
2. Describe the kinds of values and ethics and their importance.
3. Contextualize the professional attitude and approaches as per needs of society and values.
4. Explain and illustrate the process of Social, Political and Technological changes in-context to global changes.

SUBJECT CODE: HU-27005
SUBJECT NOMENCLATURE: ECONOMICS FOR ENGINEERS

Course objectives:-
1. To develop the optimizing skills of technology-use in engineering problems
2. To articulate economic analytical skills so as to contextualize the solutions of engineering problems.
3. To explore the potential of students in economic perspective of engineering professional goals.
4. To make sense of need of entrepreneurship and understand the financial reports of a business.

Course Outcomes:
(Cognitive Level – Understand) – After completion of course, the students will be able to:
CO-1: Explain behaviour of Consumer so as to estimate the demand pattern and demand elasticity for a product.
CO-2: Plan the production; choose appropriate production technology (combination of production factors); and estimate feasible range of production.
CO-3: Analyze the production-cost-profit relation and select the suitable project for investment
CO-4: Estimate price and the equilibrium for a firm/organization in different competitive market situations.
CO-5: Review, summarize and compare the financial statements of an accounting entity and able to Apply financial ratio technique for financial analysis. Co-6: Explain and illustrate the entrepreneurship and phases of start-up.

SUBJECT CODE: HUM 2251/3xxxx:
SUBJECT NOMENCLATUR: CONSTITUTION OF INDIA

COURSE OUTCOMES: After completion of course, the students will be able to:
1. Explain and elaborate the Indian Constitution through which the society and nation is governed.
2. Describe the list of fundamental rights and fundamental duties.
3. Elucidate the types of emergencies in Indian constitution.
4. Explain and illustrate the procedure of amendments in Indian constitution.

SUBJECT CODE: EI-37006
SUBJECT NOMENCLATURE: MICROPROCESSOR SYSTEMS

Course Objective: - Students should be able to: Understand design parameters of microprocessor and microcontroller based circuits. Understand architecture of 16/32 bit microprocessor. Design and analyze various peripherals required for microprocessor circuits.
Course Outcomes:-Student will able to:
CO1: To describe the evolution and organization of microprocessors and microcomputers along with its basic architecture and register set.
CO2: Able to illustrate 8085 microprocessor.
CO3: Developing skills of designing assembly language programming of microprocessors.
CO4: Develop knowledge & skills for interfacing I/O devices and peripheral sub-systems.
CO5: To develop an in-depth understanding of the operation of microprocessors – 8086
CO6: To discuss various other advance microprocessors.

Course Outcomes: Practical: Student will able to:
CO1: **Able to understand and use trainer kit (M85-03).**
CO2: Analyze, design, and simulate program **of 8085 microprocessor in assembly language.**
CO3: Able to work on software **like GNU8085**

SUBJECT CODE: EE-37003
SUBJECT NOMENCLATURE: CONTROL SYSTEM

Course Objectives: Control Engineering plays a fundamental role in modern technological systems. The aim of this course is to serve as an introduction to control system analysis and design .A control system consisting of interconnected components is designed to achieve a desired purpose. Modern control engineering practice includes the use of control design strategies for improving manufacturing processes, the efficiency of energy use, advanced automobile control.

The objectives include equipping students with:
1. Basic understanding of issues related to control systems such as modelling, time and frequency responses of dynamical systems, performance specifications.
2. Techniques for determining stability of systems.
3. Basic design aspects of various controllers and compensators.
4. Dynamical system analysis using state space model.

Course Outcomes After completing the subject student will be able to:
EE37003 (T).1: Understand the dynamic systems and analyze mathematical modelling of physical systems such as Electrical, Mechanical, Thermal and Hydraulic.
EE37003 (T).2: Evaluate the time domain and frequency domain design specifications of the system and error dynamics of first and second order systems with various inputs.
EE37003(T).3:Application of frequency domain analysis for ascertaining stability in time and frequency domain using Routh Hurwitz analysis, Root Locus, Nyquist and Bode Plots.
EE37003(T).4:Designing of Lead, Lag and Lead-Lag compensators for desired frequency domain closed loop performance, Designing of PID Controllers.
EE37003(T).5:Understanding the concept of controllability and Observability by state space analysis, State feedback Controller design with Pole Placement.

Laboratory Outcomes:

EE37003(P).1: The student should be able to turn into practice the theoretical concepts of linear control system.
EE37003(P).2: Analyze system performance under the effect of different controllers.
EE37003(P).3: Determine the stability of a well-defined transfer function using simulation tools.
EE37003(P).4: Visualize the performance parameters of LTI system in real life.

SUBJECT CODE: EC-37014
SUBJECT NOMENCLATURE: ANALOG & DIGITAL COMMUNICATION

Course Outcomes:-
CO1: Understand mathematical representation of signals.
CO2: Various transmission schemes used in analog& digital communication.
CO3: Designing a communication system sub parts.
CO4: Performance comparison of various analog& digital communications.

Average PO	2.4	2.2	2.2	1.2	1				1.3333			

Course Outcomes (Practical):-Student will able to implement and verify frequency response of

CO-1: Low Pass & High pass filters

CO2: Band Pass & All pass filters

CO3: Second order Low Pass & High pass filters

CO4: Notch and band Reject Filters

CO5: Chebyshev 2nd order Low pass & other various filter topologies.

SUBJECT CODE: EI-37513
SUBJECT NOMENCLATURE: HIGH FREQUENCY ENGINEERING

Course Objectives: At the end of course student must able to

1. Discuss and relate the mathematics & modeling of waveguides & transmission lines.
2. Elaborate the working of high frequency devices

Course Outcomes: The students will able to:

CO 1: To describe Maxwell's equation & wave equation & their interpretations.

CO 2: To discuss concepts of EM waves & transmission lines.

CO 3: To gain the knowledge of transmission of transmission lines & wave guides.

CO 4: explain the construction & working principle & applications of waveguides.

CO5: To discuss working principle and operation of high frequency components like Magnetron, Klystron & TWT.

SUBJECT CODE: EC-37562/37512
SUBJECT NOMENCLATURE: DIGITAL SIGNAL PROCESSING
Course Outcomes:-
After completing this course, the student will be able to:
CO1: Learn characteristics of signals & systems like time invariant, linear nonlinear, causal etc
. CO2: Gain knowledge of Z-transform & analyzing discrete system using Z-transform.
CO3: Designing digital filters & their implementation.

SUBJECT CODE: ME37502
SUBJECT NOMENCLATURE: MECHANICAL MEASUREMENT

Course Outcomes:

CO1: Learn the types of measurement, errors & their analysis.
CO2: Understand principle of mechanical measurement, electrical, optical etc.
CO3: Measurement of quantities like force, torque, vibration, shock, sound etc.
CO4: Mechanical elements like dampers, flappers, nozzles, valves etc.

SUBJECT CODE: EI37701 (Program Elective-II)
SUBJECT NOMENCLATURE: MICROCONTROLLER & EMBEDDED SYSTEM

Course Objective: The student will able to:

To analyze the basic concepts and Architecture associated with different microcontrollers families. Descriptive view about 8051 family of microcontrollers and designing assembly language programs for Different scenarios and calculations. Illustration of different devices interfacing with 8051 microcontroller.

Course Outcomes: The student will able to:

CO 1: Analyze the basic concepts and architecture associated with different microcontrollers families.

CO2:Descriptiveviewabout8051familyofmicrocontrollersanddesigningassemblylanguageprogramsforDifferent scenarios and calculations.

CO3: Illustration applications and design of microcontroller (8051) based system.

CO4: Evaluation of embedded system, its characteristics and applications by using few case studies.

CO5: To discuss various software architecture of embedded systems &RTOs.

SUBJECT CODE: EI-37xxx (Program Elective-II)
SUBJECT NOMENCLATURE: SMART SENSORS

Course Objectives:
The student will able to demonstrate & explain the smart sensing elemts & devices with applications.

Course Outcomes:

CO1 Concept of principle of operation of different sensors and their applications

CO2 Be updated on the recent trends in sensor technologies.

CO3 Structuring of a wireless sensor network.

CO4 Develop the logics about establishment of intelligent sensoring system.

CO5 Solve design and modelling issue using complex engineering mathematics.

SUBJECT CODE: EI-47053
SUBJECT NOMENCLATURE: PROCESS INSTRUMENTATION
Course Objectives: The student will able to analyse and apply various controllers in controlling units. They would be able to realize real world feasibility and applicability of PLC.

Course Outcomes: Student should able to

CO1: To Analyze process control system and evaluation.

CO2: Explain the application of pneumatic, hydraulic & controller in control systems.

CO3: To describe PLC and ladder programming for designing various logics.

CO4: To discuss final control elements.

CO5: To employ PLC and ladder programming to real world scenario.

Average PO	3	1.8	1	2	1.75		1					1.75

Course Outcomes -Practical: The student will able to

CO1: To analyze Pressure-displacement characteristics.

CO2: Implementation of PID controller in controlling Flow and level systems.

CO3: To employ PLC and ladder programming to real world scenario.

SUBJECT CODE: EI-47055
SUBJECT NOMENCLATURE: VLSI DESIGN

Course Objective: The student will able to design and implement digital circuits & expressions using CMOS.

Course Outcomes:- The student will able to:
Course Outcomes:-
CO1: To develop strong understanding of VLSI design methodology.
CO2: To Develop skills of designing digital circuit using VHDL.
CO3: Analyze the static & dynamic characteristics of CMOS inverter.
CO4: To design CMOS Inverter with focus on speed, power and area.
CO5: Implementation of logic functions on basis of different properties such as rise/fall/delay time, fan-in, fan-out etc.
CO6: To design FSM design using Mealy and Moore machines.

Department of Electronics & Instrumentation Engg.

Course Outcomes Practical: 1. C. Roth-Logic Design.
2. S. Brown & Z. Vranesic-Fundamentals of Digital Logic with VHDL.
3. D.L.Perry-VHDL Programming by Example.
4. Smith-Application   Specific Integrated Circuits.

SUBJECT CODE: EE-47002
SUBJECT NOMENCLATURE: POWER ELECTRONICS (ELECTIVE IV)

COURSE OBJECTIVES:
- To provide students a deep insight in to the operational behavior of practical power switching devices with respect to their static and dynamic characteristics
- To learn the working principle of classified topologies of Thyristor based AC/DC, AC/AC, DC/DC and DC/AC converters.
- To design and analyze the operation of above converters considering their applications.
- To understand design of firing circuits for Thyristor based line commutated converters.

COURSE OUTCOMES:
EE47002(T).1: Acquire knowledge about fundamental concepts and switches used in power electronics
EE47002(T).2: Ability to analyze various single phase and three phase line commutated power converter circuits and understand their applications.
EE47002(T).3: Nurture the ability to identify basic requirements for line commutated converter based design application.
EE47002(T).4: To develop skills to build, and troubleshoot power electronics circuits.
EE47002(T).5: Understand the firing circuit design for line commutated converters
EE47002(T).6: Foster ability to understand the use of line commutated converters in professional engineering.

SUBJECT CODE: EI-47257 (Program Elective I)
SUBJECT NOMENCLATURE: FIBER OPTICS & PHOTONICS

Course Objectives:- The student will able to characterize and realize the applications of fiber optics & concept behind Photonics.

Course Outcomes:- The student will able to:
CO1: To impart basic knowledge related to Optical Fibers, transmission characteristics and various measurement techniques.

Department of Electronics & Instrumentation Engg.

CO2: To gain knowledge about various Optical sensors and their applications.
CO3: apply the skills necessary to solve practical and design problems for fiber optic communication & networking system.
CO4: To develop the knowledge and understanding of optoelectronics materials & photonics integrated circuits.
CO5: Identify the behavior and functionality of different optoelectronic devices.

SUBJECT CODE: IT47201 (Program Elective-I)
SUBJECT NOMENCLATURE: DATA STRUCTURES

Course Objective: Understand data structure stack queues, lists, trees, complexity etc. in detail. Study memory hierarchy, management techniques partitioning, segmentation, paging and comparison of techniques.

Course Outcomes:-
 CO1: Understand data structure stack queues, lists, trees, complexity etc. in detail.
CO2: Study memory hierarchy, management techniques partitioning, segmentation, paging and comparison of techniques.
 CO3: Gain knowledge about CPU scheduling and multiprogramming
 CO4: Understand file systems and Input / Output operations.
 CO5: Case studies on MS-DOS, UNIX and WINDOWS NT.

SUBJECT CODE: EI-47322 (PROGRAM ELECTIVE-II)
SUBJECT NOMENCLATURE: VLSI TECHNOLOGY

Course Objective:-.
- Understand crystal growth and wafer preparation methods.
- Understand various layering in terms of chip fabrication.
- Understand of various patterning methods. knowledge about memories layout design rules, stick diagrams etc

Course Outcomes:-
CO1: To describe crystal growth and wafer preparation methods.
CO2: To understand different layering & oxidation methods in terms of chip fabrication.
CO3: To illustrate various patterning and doping methods.
CO4: To Gain knowledge about Floor-planning & EDA tools along with layout design rules, stick diagrams etc.
CO5: To discuss various subsystem design and memories.

SUBJECT CODE: BM-47613/ BM47001 (Program Elective-III)
SUBJECT NOMENCLATURE: MEDICAL INSTRUMENTATION

Course Objectives: Student will able to demonstrate knowledge about detection of bio signals and their analysis.

Course Outcomes:- The student will:
CO1: To be able to identify the concepts of Bio signal generation and transduction.
CO2: To be able to discuss the basic concepts of Recording & analysis of physiological signals
CO3: To be able to identify, compare and differentiate between various therapeutic instruments.
CO4: To be able to distinguish between medical imagining modalities
CO5: To be able to report different analytical techniques.
